

October 14, 2009

Today, AAER Inc. commissioned two 1.5 Megawatt wind turbines on Windland's existing wind farm in the Tehachapi Mountains of Southern California.

Roald Doskeland, President of Windland, said of the commissioning,

“This is a great day for our two companies. These turbines use state of the art technology to produce clean electricity at competitive prices. We have high expectations for these turbines and expect them to meet or exceed projections.”

The turbines are owned by Windland Repower II, an Idaho LLC and will be maintained for the first 2-5 years by AAER Inc.

Windland is a premier developer of Wind Energy Projects in the Western US whose mission is to create well-designed wind projects that benefit the land owners it works with, the communities it works in, and the company as a whole.
